AB Aim To reduce the level of **apolipoprotein B** (Apo B)
via the inhibitory effect of **antisense** oligodeoxynucleotides
(AODN) on expression of Apo B gene in cultured liver cells and search its
mechanism. Methods The cultured liver cells were treated with synthesized
Apo B gene **antisense**, sense ODN (SODN) and 0.9% salt soln. resp.
Apo B100 concn. was measured by Auto-biochem. Instruction. The mRNA level
was obsd. by using of reverse transcription-polymerase chain reaction
(RT-PCR). Results Apo B gene AODN 5, 10, 15, and 20 .mu.mol/L inhibited
Apo B concn. 26.6%, 34.2%, 34.2%, and 45.8% resp. The inhibitory effect
appeared in a concn.-dependent manner. RT-PCR showed that Apo B gene AODN
down regulated Apo B mRNA expression obviously. Concluisions The
ApoB gene AODN inhibited Apo B gene expression obviously and
reduced Apo B concn. The possible mechanisms are to down regulated Apo B
mRNA level and inhibit translation of Apo B gene.
ST antisense oligodeoxynucleotide lipoprotein B gene atherosclerosis
